A success vs repair rounds
held-out execution success
repair rounds k
c=0.2
c=0.4
c=0.6
c=0.8
c=1.0
B paired gain; interaction +0.000 [+0.000, +0.000]
Δ success (k=4 − k=1)
verifier coverage c
C model drift from truth
edit distance to M*
repair rounds k
c <=0.4
c >=0.8
D falsifier: divergence rate
divergence-event rate
c ≤ 0.4
c ≥ 0.8
